

DATA MANIPULATION LANGUAGE (DML)

Insert to Table

When wishing to add data to a table we use the **INSERT INTO** command. The syntax for the insert command is:

```
INSERT INTO students  
VALUES (2, 'robert', 'robertson')
```

As above, using the students table, we have inserted a new record with a student id of 2, first name: Robert, surname: Robertson.

Note that if you wish to induce a field to be blank, merely use the keyword **NULL** as the following example shows

```
INSERT INTO students  
VALUES (2, NULL, 'robertson')
```
